Ayush Anand

AI/ML Engineer Intern | Agentic AI, RAG & Distributed Systems

+91 8105061205 • anandayush1205@gmail.com • linkedin.com/in/ayushanand-1264032b2 • github.com/madebyayush

EDUCATION

RV University, Bengaluru — B.Tech, Computer Science Engineering (Honours) 2023 – 2027

Relevant coursework: Data Structures & Algorithms, Operating Systems, DBMS, OOP, Computer Networks

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript (ES6+), TypeScript, SQL

Core CS: Data Structures & Algorithms, Object-Oriented Design, Operating Systems, Computer Networks, DBMS, Complexity Analysis

Distributed Systems & Cloud: AWS (EC2, Lambda, S3, API Gateway, ECR, Elastic Beanstalk), Docker, Kubernetes, CI/CD, Kafka (basics)

AI/ML & Backend: LLMs, Agentic Systems (ReAct, Planning, Reflection), RAG, Vector Databases (Pinecone), FastAPI, Node.js, React.js, MongoDB

PROFESSIONAL EXPERIENCE

iOpex Technologies Pvt. Ltd. — AI Intern *Jun 2026 – Sep 2026 | Chennai (On-site)*

- Building agentic AI workflows and multi-model systems for production use cases, designing RAG pipelines and evaluating retrieval quality across document types.
- Deployed and benchmarked LLMs on internal GPU servers, evaluating trade-offs between model size, latency, and hardware footprint for production serving.
- Worked across the stack from model serving infrastructure to agent orchestration logic, coordinating with engineers on system design decisions.

IDBI Bank — Software Development Intern *Dec 2023 – Feb 2024*

- Built an NLP-based chatbot for intent recognition and text preprocessing over secure banking data, implementing deterministic pipeline stages for tokenization and real-time inference.
- Trained ML models on domain-specific datasets and implemented data governance guardrails for banking-grade security requirements.

SELECTED PROJECTS

AgentOps — Multi-Agent Orchestration Platform | GitHub

- Designed a three-tier multi-agent hierarchy with a four-layer memory system (Pinecone, Redis, working memory, PostgreSQL) and an autonomous incident-response module.
- Implemented planning, reflection, and tool-use patterns with human-in-the-loop checkpoints; 377/380 tests passing across three completed phases.

PhishGuard — Real-Time Phishing Detection System | GitHub

- Built a serverless phishing classifier on AWS Lambda achieving 96.65% accuracy and 98.13% recall with sub-150ms inference latency.
- Architected an event-driven detection pipeline (FastAPI, Lambda, S3, SES) with a monitoring dashboard on EC2 and MongoDB Atlas logging.

GNN-Based Social Network Analysis

- Implemented and compared GCN, GAT, and GraphSAGE architectures on the Facebook SNAP dataset for link prediction, community detection, and influencer identification.

Chatzy – Real-Time Chat Application | MERN Stack | WebSockets | JWT | GitHub

- Built a full-stack real-time messaging platform featuring **WebSocket-based live chat**, **JWT authentication**, and a secure admin control panel. Managed database operations using **MongoDB Atlas** to handle persistent messaging and user data with high availability.

University Portal – Role-Based University Portal

- Secure MERN Architecture: Built a role-based portal with passwordless OTP logins and encrypted admin operations. Academic Management: Featured dynamic batch-year enrollment and mass attendance tools with a minimalist aesthetic. GitHub

Airpods Max – Interactive Smooth Frontend

- Premium Frontend: Developed an Apple-inspired product showcase using HTML, CSS, and TypeScript. Immersive UX: Implemented smooth animations and responsive layouts with a clean, minimalist aesthetic. Link: airpods-max

CERTIFICATIONS & ACHIEVEMENTS

- AWS Solutions Architecture Associate & AWS Cloud Practitioner Essentials (2026)
- NPTEL Affective Computing (IIT Madras) — Elite, Top 5%, 94/100 (2026)
- BCG GenAI Job Simulation (2026)
- **Cisco Data Analytics Essentials | Infosys Cybersecurity Fundamentals** (2026)
- IBM Network Security | IBM SkillsBuild (2026)
